[ARCHERS]

TECHNOLOGY

824 237 Archer technology uses only wood, fiber, and vegetable plants for raw material, with exceptional use of skin for quivers and baby slings, and fur for decoration of body and of the hunting bow.

372 Fire making is unknown, though the usage of fire itself is universal. Schebesta (1941) stresses its importance to the Mbuti, and says that embers are always carried about, even on the march. A new fire is lit by taking embers from an old one. Fire is further the only means of lighting, the wood *akata* giving the best light. [373] [416] When walking at night, the Mbuti always carry firebrands and light the path by scattering sparks in all directions. Fire is used, apart from purposes of cooking, giving warmth, and lighting, as the only adequate weapon against the black ants that not infrequently invade Mbuti camps in the middle of the night and force immediate withdrawal. Trilles (1932) and Le Roy (1897) both mention fire making by different techniques among the Pygmies in the then French Congo, but no reliable source has mentioned the practice of fire making among Ituri Pygmies. Many travelers and observers mention its absence.

411 [114] As confirmed by all explorers except Burrows (1898) who spoke of the Aka, the Mbuti use poison on their arrows (Schebesta, 1941). They never, however, put poison on arrows tipped

TECHNOLOGY

372 Fire making is totally unknown, even as it is to some of the neighboring village tribes, according to Putnam. Glowing embers wrapped in phrynium leaves are carried everywhere, even on short journeys. They are also used, as described by Schebesta, for light at night and for fighting off invading ants. Another form of light (Fig. 31a), in the shape of resin torches (KiBira: *kasuku*), is sometimes used, but at no time is wood specially cut (such as the *akata* mentioned by Schebesta) to make firebrand torches. Campfires are always made the same way—three logs, their ends pointing to the center, where kindling is placed and where cinders form on which cooking is done.

[416] [373] [314] [252]

411 Poison is used on untipped arrows, as described by Schebesta. These arrows are carefully protected by leaf covers until used. They are much more widely used than the metal-tipped arrows, largely, as the Mbuti admit themselves, because they are such poor shots.

Sometimes spearheads are also untipped, the wooden points being fire-hardened, but there is no evidence that these are poisoned, and they are becoming rare.

462 In none of the normal routine work in a Pygmy camp such as that described by Putnam is there any specialization, except in so far as certain tasks are divided between men and women.
